

VENCOOL

SMART COOLER WITH ACCESS CONTROL

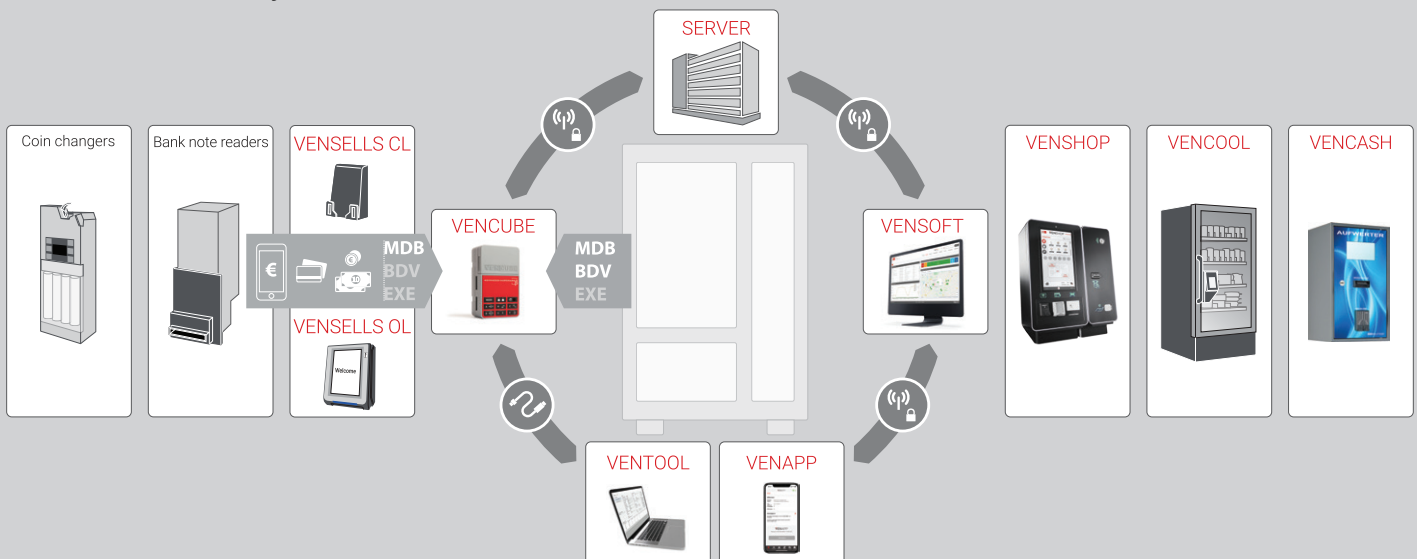

Combine the shopping experience of Micro-Markets with the advantages of vending machines!

- + All advantages of normal "locked" vending machines
- + Intelligent product recognition through integrated access control system
- + Intuitive operation for drivers through practical smartphone app
- + Natural shopping experience for the customer
- + Ideal for "semi-open" areas such as hospitals, airports, hotel lobbies, etc.

This is how vending becomes connected vending

The Vensolutions system overview

VENCOOL IN DETAIL

Vencool is a real alternative to vending machines, leading to higher revenues and profitability while providing customers with excellent shopping experiences.

Vencool offers an integrated sensor-based access control system that automatically recognises the items purchased. The technology tracks products individually, along with their position on the shelf. This allows it to distinguish between a Coke and a Coke Zero next to each other.

The customers have the freedom to select the items they want and put back the items they don't want.

The system works with a combination of weighted shelves and visual recognition, which is not based on shapes or colours but on customer behaviour.

The unique telemetry solution enables effective and legally compliant vending machine accounting as well as control and remote diagnostics, simplifies on-site control and maintenance of the equipment and automates your route planning.

Advantages for the customer

- + Natural shopping experience through full access to the products - "touch before you buy".
- + Put products back
- + Shop as usual, with minimal restrictions
- + Automatic product recognition - no scanning required
- + Real-time shopping cart & on-screen pricing information
- + Intuitive voice instructions for a smooth shopping experience
- + 100% accurate yet with the ability to correct

Advantages for the operator

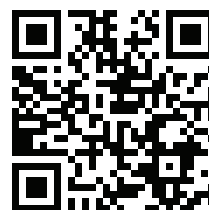

- + Secure sales combined with the user-friendliness and the higher profits of micro-markets
- + Higher micro-market sales in a semi-open environment
- + Business option for previously untapped areas
- + Eliminate product limitations (size and shape) of vending solutions
- + Uncomplicated, unresponsive system
- + Full integration with Vensolutions and associated benefits.
- + Adding a new product within seconds using "auto planogram".
- + Losses due to theft are virtually eliminated
- + Easy to install - "plug and play" setup

Technical data

Model	Doors	Shelves	Dimensions (w x d x h / mm)	EEC	EEI	Temperature class	Annual energy consumption (kWh)	Amperage (A)	Voltage (Volt)	Weight (kg)
TGO-27-TSL01	1	5	688x759x1998	C	21,1	Category 3	637	2,4	230-240 V 50-60 Hz	140

* Depth specification plus 98mm for door handle application (access control unit).
Height specification plus 85mm for CDU application (product recognition & voice output)
