

VENCUBE

THE HEART OF CONNECTED VENDING

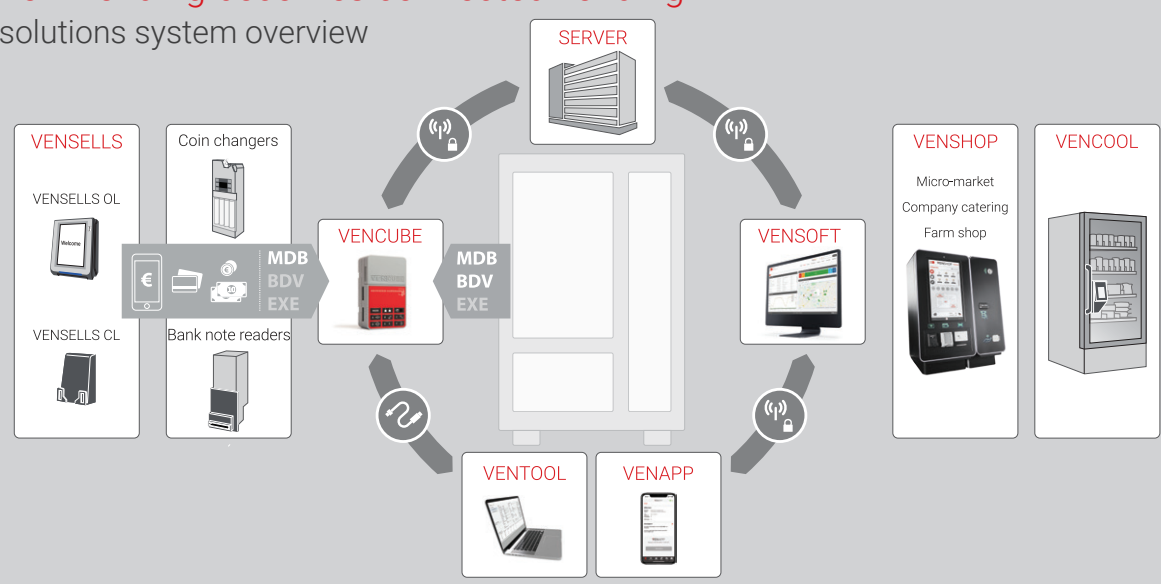

With the Vencube, the central unit of our unique telemetry solution Vensolutions, you always have your vending machines, micromarkets and intelligent coolers under control:

- + Checking of filling levels
- + Possibilities for legally sound accounting
- + Fault reporting for fast problem solving
- + Simplifying refill trips
- + Contactless and mobile payment (NFC-Payment)

This is how vending becomes connected vending

The Vensolutions system overview

VENCUBE and VENSOLUTIONS in detail

Vensolutions has been developed by S+M for active controlling of your operating and service processes for vending machines, ticketing and company catering.

The unique telemetry solution offers the possibilities for an effective and legal soundway for your vending machine operating and accounting.

Easier controlling and remote diagnosis, simplified maintenance on location and automating your route planning for the refilling trips become possible.

The principle

All data records are SSL encrypted

VENCUBE - the hardware

- Central control unit inside the vending machine
- All events are monitored here in real time and sent to the Vensoft user platform
- The status of the vending machine can be efficiently supervised at any time
- With its converter technology the Vencube supports all vending specific protocols (Executive, MDB and BDV).

VENSOFT - the user platform

- Central online user platform
- All data from the Vencube is collected and analyzed
- All data is stored access protected on two separate data servers in Germany for the duration of 10 years plus the current year
